

1      **ABSTRACT OF THE DISCLOSURE**

2            A digital photo display has a display assembly and a frame. The display  
3      assembly has a body, a memory card port and a screen. The body has a main  
4      control circuit mounted in the body. The memory card port is electrically  
5      connected to the main control circuit so a memory card can be inserted into the  
6      memory card port. The screen is mounted on body and is electrically connected  
7      to the main control circuit in the body to show a digital photo on the screen. The  
8      frame is attached to the body of the display assembly and has a window  
9      corresponding to the screen. Accordingly, the photo display can store and show  
10     digital photos conveniently to make use of the photo display versatile.
